FLASK PROJECT

CREATE FLASK

```
from flask import Flask

from flask_sqlalchemy import SQLAlchemy

from flask_login import LoginManager

create_app():

    app = Flask(__name__) # creates the Flask instance, __name__ is
                           # the name of the current Python module

    app.config['SECRET_KEY'] = 'secret-key-goes-here' # it is used
                           #by Flask and extensions to keep data safe

    app.config['SQLALCHEMY_DATABASE_URI'] = 'sqlite:///db.sqlite'
```

```

        #it is the path where the SQLite database file
        #will be saved

app.config['SQLALCHEMY_TRACK_MODIFICATIONS'] = False

        # deactivate Flask-SQLAlchemy track modifications

db.init_app(app) # Initialiaze sqlite database

# The login manager contains the code that lets your application
# and Flask-Login work together

login_manager = LoginManager() # Create a Login Manager instance

login_manager.login_view = 'auth.login' # define the redirection

        # path when login required and we attempt
        # to access without being logged in

login_manager.init_app(app) # configure it for login

from models import User

@login_manager.user_loader

def load_user(user_id): #reload user object from the user ID

        #stored in the session

        # since the user_id is just the primary key of our user

        # table, use it in the query for the user

        return User.query.get(int(user_id))

# blueprint for auth routes in our app

# blueprint allow you to orgnize your flask app

from auth import auth as auth_blueprint

app.register_blueprint(auth_blueprint)

# blueprint for non-auth parts of app

from main import main as main_blueprint

```

```
app.register_blueprint(main_blueprint)

return app
```
